

iamKraft Coat[®]IT

- is produced with a technology that minimize pinholes
- has a very clean sheet
- has improved flatness
- has two smooth sides
- is available in surface weights from 40 g/m² to 80 g/m²

Nordic Paper is FSC and PEFC certified

iamKraft Coat[®]IT
LAMINATING PAPER

NORDICPAPER
The natural leader in speciality paper

A new generation of laminating paper is here

Nordic Paper has developed a world leading product among the most demanding paper applications – iamKraft Coat®IT. Pulp and paper from 100 % Scandinavian virgin fibres, enable us to produce one of the strongest papers in the world.

CLOSED SHEET

In our twin wire paper machine we are able to produce a kraft paper with a low thermiability, i.e. a closed sheet without pinholes.

HIGH MECHANICAL STRENGTH

With 100 % Scandinavian virgin fibres in our pulp, we are proud to guarantee one of the strongest papers in the world.

FLAT

Most laminating papers are produced in a traditional MG paper machine with a large, steam-heated yankee cylinder. This gives a smooth and glossy surface, but the unbalanced drying process also increases the risk of curl. Our new generation of iamKraft Coat®IT is produced with the use of a multi cylinder drying process which enable us to produce a non curling paper, allowing for supreme handling in the converting line.

SMOOTH & DUST FREE

The last part of the papermaking process is soft calendering to give a smooth surface on both sides of the paper, reducing surface dust and compressing the paper. This optimize the printing properties, no matter side, and give better adhesion.

APPLICATION

- iamKraft Coat®IT is well suited for lamination of aluminum and foils for insulating products.
- iamKraft Coat®IT is an excellent choice for protection of acrylic sheets.
