MASKING PAPER

NORDICPAPER
The natural leader in speciality paper

A new generation of masking paper is here

Nordic Paper has developed a world leading product among the most demanding paper applications – iamKraft Masque®IT. Pulp and paper from 100 % Scandinavian virgin fibres enable us to produce one of the strongest papers in the world.

Nordic Paper has developed a world leading product among the most demanding paper applications and offers a premium masking paper that exceeds the customer requirements.

DENSE

In our twin wire paper machine we are able to produce a kraft paper with a low thermiability, i.e. a closed sheet without pinholes.

FLAT

Most masking papers are produced in a traditional MG paper machine with a large, steam-heated yankee cylinder. This gives a smooth and glossy surface, but the unbalanced drying process also increases the risk of curl. Our new generation of iamKraft Masque®IT is made without the use of a yankee cylinder which enable us to produce a very flat sheet, allowing for supreme handling in the paint shop.

EXTRA CLEAN

The pulp is extra washed. This makes it possible to produce a very clean sheet. Compared to other masking materials, iamKraft Masque®IT absorbes superfluous paint which also provides a cleaner working environment.

A SMOOTH DUSTFREE SURFACE

The last part of the papermaking process is soft calendering to give a smooth and dust free surface on both sides – the ultimate masking paper.
